

## Food and Farming

**We will explore Jersey's rich farming history, from the first Neolithic farmers, to the dawn of the polytunnel!**

**We will find out where our food comes from, and how farming has changed and evolved over the years. This will be supported by our trip to Hamptonne Country Life Museum.**

**As geographers we will find out where different crops come from and map their origins using maps, globes and atlases. We will talk about how the food will have travelled to Jersey.**

**As scientists, we study plants and label their different parts. We will also conduct an investigation; do all daisies have the same number of petals?**
